- Mineral Reserves¹ used in SAMREC and IMMM Codes whereas termed Ore Reserves in the JORC Code
- Exploration Target Mineralisation used in JORC Code whereas termed Exploration Results² in the SAMREC Code. The potential quantity and grade is conceptual in nature and there has been insufficient exploration to define Mineral Resources and it is uncertain if further exploration will result in the determination of a Mineral Resource.

The information in this report that relates to exploration results for Stellite, Mecklenburg and Vlakpoort is based on information compiled by the MSA Group, Andrew Scogins and Shango Solutions respectively.

The team of people involved in the Mecklenburg, MSA and Shango Solutions estimation process is listed below:

Person:	Position:	Affiliations:
Sifiso Siwela (MSA)	Exploration Project Manager	Pr.Sci.Nat, MGSSA
Mike Hall (MSA)	Mineral Resources Consultant	Pr.Sci.Nat, MGSSA, MAusIMM
Andrew Scogings (Independent)	Geological Consultant	MAusIMM, MAIG
Hendrik Pretorius (Shango)	Geological Consultant	Pr.Sci.Nat, MGSSA
Stefanie Weise (Shango)	Geological Consultant	MGSSA

The combined Stellite, Mecklenburg and Vlakpoort Measured and Indicated Resource categories declared as at 31 December 2016, decreased from that declared in December 2015 by 0.2 million tonnes mainly due to depletion at Stellite (rounded up to nearest 0.1 million).

The combined total Stellite, Mecklenburg and Vlakpoort Mineral Resources declared as at 31 December 2016, decreased from that declared in December 2015, by 0.183 million tonnes but the grade and the Cr to Fe ratio remained the same.

The Mineral Resources for Stellite declared as at 31 December 2015, decreased by 0.198 million tonnes from that declared in December 2015, mainly due to depletion in the MG4 open pit. The Mineral Resources were positively impacted by the addition of tailings material of 0.049 million tonnes.

The Mineral Resources for Mecklenburg and Vlakpoort declared as at 31 December 2016 remained the same as those declared in December 2015 because no mining was conducted during 2016.

The combined Stellite, Mecklenburg and Vlakpoort Mineral Reserves¹ declared as at 31 December 2016, increased from that declared in December 2015, by 0.896 million tonnes mainly due to the increase in the highwall in the MG4 open pit at Stellite from 20 to 40m and in the LG6 open pit at Mecklenburg from 40 to 65m. The Cr2O3 grade increased by 0.13% to 36.91% Cr2O3 and the Cr to Fe ratio remained at 1.43.

Mineral Resource and Mineral Reserve¹ Statement for Chromite for the Afarak Group in Southern-Africa as at 31 December 2016.

- Mineral Reserves¹ used in SAMREC and IMMM Codes whereas termed Ore Reserves in the JORC Code
- Exploration Target Mineralisation² used in JORC Code whereas termed Exploration Results in the SAMREC Code. The potential quantity and grade is conceptual in nature and there has been insufficient exploration to define Mineral Resources and it is uncertain if further exploration will result in the determination of a Mineral Resource.
- The PGM rights at Mecklenburg do not belong to Afarak and therefore do not satisfy all requirements for reporting.
- No Mineral Reserves could be declared for Stellite yet as the feasibility study to extract PGMs, are still in progress.

The Measured and Indicated Mineral Resources for Stellite declared as at 31 December 2016, decreased from that declared in December 2014 due to depletion in the MG4 open pit.

The Measured and Indicated Mineral Resources for Vlakpoort declared as at 31 December 2016 remained the same as that declared in December 2015 because no mining was conducted during 2016.

The combined Stellite and Vlakpoort Mineral Resources declared as at 31 December 2016, increased from that declared in December 2015, by 0.027 million tonnes, but the PGM grade remained the same. The depletion in the MG4 open pit at Stellite was positively impacted by the addition of tailings material.

The information in this statement that relates to Exploration Results and Mineral Resources is based on information compiled by Hermanus Berhardus Swart, a Competent Person who is a Professional Natural Scientist registered with South African Council for Natural Scientific Professions accredited (No. 400101/00) and a Member of the Geological Society of South Africa, each of which is a "Recognised Professional Organisation" (RPO) that is included in a list that is posted on the ASX website from time to time. The Competent Person is employed by Dunrose Trading 186 (PTY) Ltd trading as Shango Solutions, which provides services as geological consultants. The Competent Person has sufficient experience which is relevant to the style of mineralisation and types of deposits under consideration, and to the activity which has been undertaken, to qualify as a Competent Person as defined by the 2012 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC), the 2001 Code for reporting of Mineral Exploration Results, Mineral Resources and Mineral Reserves in the United Kingdom, Ireland and Europe (IMMM) as well as the 2007 edition of the South African Code for Reporting of Exploration Results, Mineral Resources and Mineral Reserves (SAMREC). The Competent Person consents to the inclusion of the matters based on his information in the form and context in which it appears.

H.B. Swart
Pr.Sci.Nat and FGSSA
Principal Geologist – Shango Solutions
